

 Learning Objective: To solve word problems using basic operations

Solve the word problems.

Oliver is training for a run and runs 7 km every day for 25 days. What is the total distance that he runs?

$$\square \times \square = \square$$

Mr. Jones must share 64 glue sticks between 4 classes. How many glue sticks should he give to each class?

$$\square \div \square = \square$$

We can use our knowledge of addition, subtraction, multiplication or division to solve problems.

Complete the questions below.

Complete the number sentence.

Aaron buys a diving mask for \$61 and some flippers for \$46. How much does he spend in total?

$$\square + \square = \square$$

Complete the number sentence.

If there are 18 cans of crushed tomatoes in each box, how many cans are there in 6 boxes?

$$\square \times \square = \square$$

Complete the number sentence.

There are 48 rubbish bins to share between 8 town parks. How many bins should go in each park?

$$\square \div \square = \square$$

Complete the number sentence.

There are 7 watermelons in each bag. How many watermelons are there in 35 bags?

$$\square \times \square = \square$$

Complete the number sentence.

Peter has 83 books. He donated some which left him with 58 books. How many books did Peter donate?

$$\square - \square = \square$$

 Learning Objective: To solve word problems using basic operations

Solve the word problems.

Oliver is training for a run and runs 7 km every day for 25 days. What is the total distance that he runs?

$$\boxed{7} \times \boxed{25} = \boxed{175}$$

Mr. Jones must share 64 glue sticks between 4 classes. How many glue sticks should he give to each class?

$$\boxed{64} \div \boxed{4} = \boxed{16}$$

We can use our knowledge of addition, subtraction, multiplication or division to solve problems.

Complete the questions below.

Complete the number sentence.

Aaron buys a diving mask for \$61 and some flippers for \$46. How much does he spend in total?

$$\boxed{\$61} + \boxed{\$46} = \boxed{\$107}$$

Complete the number sentence.

If there are 18 cans of crushed tomatoes in each box, how many cans are there in 6 boxes?

$$\boxed{18} \times \boxed{6} = \boxed{108}$$

Complete the number sentence.

There are 48 rubbish bins to share between 8 town parks. How many bins should go in each park?

$$\boxed{48} \div \boxed{8} = \boxed{6}$$

Complete the number sentence.

There are 7 watermelons in each bag. How many watermelons are there in 35 bags?

$$\boxed{7} \times \boxed{35} = \boxed{245}$$

Complete the number sentence.

Peter has 83 books. He donated some which left him with 58 books. How many books did Peter donate?

$$\boxed{83} - \boxed{58} = \boxed{25}$$
