

 Learning Objective: To solve word problems using basic operations

Solve the word problems.

Oliver is training for a run and runs 8 km every day for 30 days. What is the total distance that he runs?

$$\square \times \square = \square$$

Mr. Jones must share 52 glue sticks between 4 classes. How many glue sticks should he give to each class?

$$\square \div \square = \square$$

We can use our knowledge of addition, subtraction, multiplication or division to solve problems.

Complete the questions below.

Complete the number sentence.

Aaron buys a diving mask for \$49 and some flippers for \$63. How much does he spend in total?

$$\square + \square = \square$$

Complete the number sentence.

If there are 16 cans of crushed tomatoes in each box, how many cans are there in 8 boxes?

$$\square \times \square = \square$$

Complete the number sentence.

There are 63 rubbish bins to share between 9 town parks. How many bins should go in each park?

$$\square \div \square = \square$$

Complete the number sentence.

There are 4 watermelons in each bag. How many watermelons are there in 26 bags?

$$\square \times \square = \square$$

Complete the number sentence.

Peter has 76 books. He donated some which left him with 47 books. How many books did Peter donate?

$$\square - \square = \square$$

 Learning Objective: To solve word problems using basic operations

Solve the word problems.

Oliver is training for a run and runs 8 km every day for 30 days. What is the total distance that he runs?

$$\boxed{8} \times \boxed{30} = \boxed{240}$$

Mr. Jones must share 52 glue sticks between 4 classes. How many glue sticks should he give to each class?

$$\boxed{52} \div \boxed{4} = \boxed{13}$$

We can use our knowledge of addition, subtraction, multiplication or division to solve problems.

Complete the questions below.

Complete the number sentence.

Aaron buys a diving mask for \$49 and some flippers for \$63. How much does he spend in total?

$$\boxed{\$49} + \boxed{\$63} = \boxed{\$112}$$

Complete the number sentence.

If there are 16 cans of crushed tomatoes in each box, how many cans are there in 8 boxes?

$$\boxed{16} \times \boxed{8} = \boxed{128}$$

Complete the number sentence.

There are 63 rubbish bins to share between 9 town parks. How many bins should go in each park?

$$\boxed{63} \div \boxed{9} = \boxed{7}$$

Complete the number sentence.

There are 4 watermelons in each bag. How many watermelons are there in 26 bags?

$$\boxed{4} \times \boxed{26} = \boxed{104}$$

Complete the number sentence.

Peter has 76 books. He donated some which left him with 47 books. How many books did Peter donate?

$$\boxed{76} - \boxed{47} = \boxed{29}$$
